

IN THE SPECIFICATION

Please replace the paragraph beginning at page 25, line 1, with the following rewritten paragraph:

---

a1  
5           This is just one possible method to achieve alignment. Other  
characteristic features of fingerprint images, such as the center and orientation of the  
ellipse that bounds the fingertip image, could be used to align the enrolled and presented  
fingerprint images. A similar method is to use the first and second-order moments of the  
fingerprint images. These moments can be interpreted as defining equivalent ellipses and  
10 can be used in the same fashion as above. Still another method would be to save a  
private copy of the original enrollment image 650, then directly align each authentication  
image 670 with it using some overall matching function before applying the specified  
distortion to the authentication image. The private copy of the original enrollment image  
might be stored in a device which remains in the possession of the user (such as a  
15 smartcard) in order to guard against exposure of the user's actual biometric.

---

Please replace the paragraph beginning at page 35, line 12, with the following rewritten paragraph:

---

a2  
20           Other embodiments, used as business methods are more fully described  
and claimed in U.S. Patent application number 09/596,085 ~~xxx~~, filed on the same day as  
this disclosure, and entitled **BUSINESS SYSTEM AND METHOD USING A  
DISTORTED BIOMETRICS**, to Bolle et al., which is herein incorporated by reference  
in its entirety.
